

Sam Trouy

trouys16@gmail.com · Chattanooga, TN · [LinkedIn](#) · [GitHub](#)

Product-minded full-stack engineer with five years of founding-team experience building and launching SaaS products across customer discovery, Go backend architecture, React and TypeScript frontend development, and production operations. Builds human-in-the-loop, AI-assisted systems with LangGraph and LangChain for research, automation, and opportunity assessment.

EXPERIENCE

Founding Software Engineer

Apr 2021–June 2026

SheetRocks, Inc.

Remote, USA

- Owned core SaaS product features end-to-end from customer discovery and scoping through REST API design in Go, interactive frontend development with React and TypeScript, and launch.
- Built data-intensive spreadsheet functionality supporting millions of rows, extending the Go calculation engine with sorting, formula range selection, and cross-sheet references.
- Conducted weekly user interviews and analyzed production usage to drive product priorities and feature design.
- Designed concurrent Go calculation endpoints that improved spreadsheet performance by over 500%.
- Owned AWS EC2 deployments and production reliability, including on-call debugging with CloudWatch logs and usage metrics.

GTM Engineer (Fractional)

July 2026–Present

JJS Group

Remote, USA

- Build AI-assisted systems with LangGraph and LangChain to surface technical hiring signals, structure account and contact research, and support opportunity assessment.
- Automate discovery and research while keeping contact decisions and external outreach human-reviewed and manually sent.
- Work directly on technical business development, drawing on founding engineer experience to understand engineering roles and hiring situations.

LANGUAGES AND TECHNOLOGIES

- **Languages:** Go, JavaScript, TypeScript
- **Technologies:** React, Node.js, MongoDB, Redis, AWS, Docker, Git
- **Familiarity with:** Elixir, Python, Lisp, PostgreSQL

OPEN SOURCE & PROJECTS

- **Zed:** Merged two contributions to the Rust codebase: fixed agent editor layout alignment ([PR #59735](#)) and added Unicode non-breaking character support with regression tests ([PR #59775](#)).
- **Searchdesk:** Built human-in-the-loop LangGraph workflow for job research and validation, tailored document generation and compilation, automated testing, and review before submission.
